◆ Performance

Item	Specifications		
Quality Factor (Q)	2,000 min.		
Insulation Resistance (IR)	10 ⁵ Megohms min. @ +25°C at rated WVDC. 10 ⁴ Megohms min. @ +125°C at rated WVDC.		
Rated Voltage	250V		
Dielectric Withstanding Voltage (DWV)	250% of rated voltage for 5 seconds.		
Operating Temperature Range	-55°C to +175°C		
Temperature Coefficient (TC)	0±30ppm/°C		
Capacitance Drift	$\pm 0.02\%$ or ± 0.02 pF, whichever is greater.		
Piezoelectric Effects	None

♦ KEC75P Performance Curve

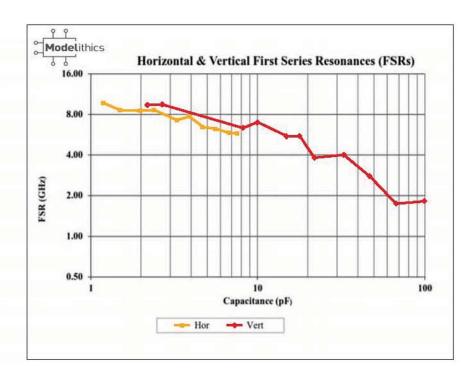

The First Parallel Resonance, FPR, is defined as the lowest frequency at which a suckout or notch appears in [S21]. It is generally independent of substrate thickness or dielectric constant, but does depend on capacitor orientation. A horizontal orientation means the capacitor electrode planes are parallel to the plane of the substrate; a vertical orientation means the electrode planes are perpendicular to the substrate.

♦ KEC75P Performance Curve

The First Series Resonance, FSR, is defined as the lowest frequency at which the imaginary part of the input impedance, Im[Zin], equals zero. Should Im[Zin] or the real part of the input impedance, Re[Zin], not be monotonic with frequency at frequencies lower than those at which Im[Zin] = 0, the FSR shall be considered as undefined. FSR is dependent on internal capacitor structure; substrate thickness and dielectric constant; capacitor orientation, as defined alongside the FPR plot; and mounting pad dimensions.

Definitions and Measurement conditions:

The definitions on the charts are for a capacitor in a series configuration, i.e., mounted across a gap in a microstrip trace with a 50-Ohm termination. The measurement conditions are: substrate -- Rogers RT/duroid? 5880; substrate dielectric constant = 2.20; substrate thickness (mils) = 10; gap in microstrip trace (mils) = 23.7; microstrip trace width (mils) = 30.0; Reference planes at sample edges.

All data has been derived from electrical models created by Modelithics, Inc., a specialty vendor contracted by KEC. The models are derived from measurements on a large number of parts disposed on several different substrates.
